

# CAPTURE

## The Video Editor

Cosc 3P94 Course Project  
Stage 2  
Group 17

## Accessing the project:

Group 17 designed Capture, a video editor website which is hosted on github, ideally meant to be accessed on a computer/laptop.

The link to access the website is as follows:

<https://capture-editor.github.io/>

## Accessing the project files through a live server:

- Download Visual Studio Code and open the project folder with vs code.
- All project files are available to be viewed, there are two files (index.html, main.css) and one folder (media)
- To run the files: right-click the index.html file in vs code and select "Open with live server" (this only works if the live server extension is installed, otherwise dragging and dropping file to browser should also run)
- The video editor should be displayed on your preferred web browser.
